Disclaimer

This document is an output of an exercise undertaken by TERI under the GEF-UNIDO-BEE project's initiative for the benefit of MSME units and is primarily intended to assist the decision making by the management of the intended unit for the proposed technology. While every effort has been made to avoid any mistakes or omissions, GEF, UNIDO, BEE or TERI would not be in any way liable to any person or unit or other entity by reason of any mistake/omission in the document or any decision made upon relying on this document.

Acknowledgement

The Energy and Resources Institute (TERI) places on record its sincere thanks to Global Environment Facility (GEF), United Nations Industrial Development Organization (UNIDO) and Bureau of Energy Efficiency (BEE) for giving opportunity to partner in this prestigious assignment on Capacity Building of Local Service Providers (LSPs) under the GEF-UNIDO-BEE project 'Promoting energy efficiency and renewable energy in selected MSME clusters in India'.

TERI is particularly grateful to Mr Milind Deore, Director, Bureau of Energy Efficiency, Mr Sanjay Shrestha, Industrial Development Officer, Industrial Energy Efficiency Unit, Energy and Climate Branch, UNIDO, Mr Suresh Kennit, National Project Coordinator, UNIDO, Mr Niranjana Rao Devela, National Technology Coordinator, UNIDO, Mr P. Vora Cluster Leader, Thangadh Foundry Cluster, UNIDO, Mr Nitin B Shah, M/s Amrut Ceramic and Panchal Ceramic Association Vikas Trust for their support and guidance during the project.

Last but not least, the interactions and deliberations with numerous foundry units, industry associations, technology providers and who were directly or indirectly involved throughout the study were exemplary and the whole exercise was thoroughly a rewarding experience for TERI.

Executive summary

The overall aim of the GEF-UNIDO-BEE project 'Promoting Energy Efficiency (EE) and Renewable Energy (RE) in selected MSME clusters in India' is to develop and promote a market environment for introducing energy efficiency and enhancing the use of renewable energy technologies in process applications in selected energy-intensive MSME clusters in India. This would help in improving the productivity and competitiveness of the MSME units, as well as in reducing the overall carbon emissions and improving the local environment.

Under the GEF-UNIDO-BEE Project, TERI has been entrusted to undertake Capacity building of Local Service Providers (LSPs) to BEE. The Scope of Work under the project,

- Organizing 4 one-day training/ capacity building workshops for LSPs in each cluster.
- Development of 10 bankable DPRs for each cluster, based on mapping technology needs with capacities of local technology suppliers/service providers, and also replication potential and applications to banks in each cluster.

Brief introduction of the MSME unit

Name of the unit	M/s Amrut Ceramic
Constitution	Partnership
MSME Classification	Small
No. of years in operation	8
Address: Registered Office:	Tarnetar Road, Thangadh Gujarat-363 530
Industry-sector	Ceramic
Products manufactured	Sanitary ware
Name(s) of the promoters/ directors	Mr Nitin B Shah Mrs. Savita Ben B Shah
Existing banking arrangements along with the details of facilities availed	HDFC Bank Limited

Brief highlights of the past financial position of the MSME unit

		(Rs lakh)
		FY 2018
S. No	Particulars	(Audited)
1	Total income	162.8
2	Net profit	5.32

A detailed assessment study was undertaken in the identified area with the use of the sophisticated handheld instruments. Energy consumption pattern and production data were collected to estimate the specific energy consumption of the unit. The unit level baseline of the unit was also estimated using the historical data. The plant is consuming about 161,682 kWh of electricity per year. The annual consumption of the NG is 269,216 SCM and HSD is 2,400 litres. The total energy consumption of the unit during last 12 months is estimated to be 249 toe which is equivalent to 85 lakh rupees. The total CO₂ emission during this period is

estimated to be 610 tonnes. Electricity, HSD and NG were considered for CO₂ emission estimation.

The unit manufactures the ceramic sanitary ware. The total annual production of the unit during 2017-18 is estimated to be 17,500 pcs per month.

Accepted/ recommended technology implementation

The recommended technology considered after discussion with the plant personnel for implementation in the unit is given below.

Technology	Annual energy saving	Investment ¹ (Rs lakh)	Monetary savings	Simple payback period (Years)	Emission reduction (tonnes of CO ₂)
	Electricity (kWh)		(Rs lakh/year)		
Replacing existing compressed air piping network with seamless piping	35,760	4.5	2.7	1.7	29.3

Other benefits

- The proposed project is not expected to bring in any change in process step or operating practices therefore no change expected in the product quality.
- Implementation of the selected technology in the unit may result in reduction in CO₂ emissions.

Cost of project & means of finance

2.0 Energy profile

2.1 Process flow diagram

Manufacturing of ceramic item uses wide range of raw material combination to produce different shape, size and colour. It requires both electrical and thermal energy at different stages of the process to operate the ball mill, casting/moulding, kilns, cutting & finishing machines and utilities such as motors, pumps air compressor etc. Ceramic manufacturing process primarily consists of mould preparation, body material preparation, shaping, drying and firing. Typical process flow chart is shown with figure 2.1.

Figure 2.1: Process flow chart

2.2 Details of technology identified

The details of the compressed air system in the unit are given in table 2.2.

Table 2.2: Details of existing compressed air system

Particulars	Unit	Compressor - 1
Make	-	IR
Type	-	Receiver
Model No.	-	-
Year of Installation	-	2007
Purpose	-	Process air
Capacity of receiver	M ³	1
Rated Capacity	M ³ /Min	4.25

2.3 Energy used and brief description of their usage pattern

The unit uses grid power supplied by Paschim Gujarat Vij Company Ltd. under the tariff category LTMD. Table 2.3 provides the details of energy uses.

Table 2.3: Energy used and description of use

S No	Energy source	Description of use
1	Electricity	Motive power for different drives in different process sections and utilities
3	NG	Kiln

2.4 Energy sources, availability & tariff details

Different energy sources, availability of listed energy types and their respective tariffs are given in table 2.4.

Table 2.4: Energy sources, availability and tariffs

Particular	LTMD
Demand charges	<ul style="list-style-type: none"> For first 40 kW of billing demand Rs. 98/kW/month Next 20 kW of billing demand Rs. 130/kW/month Above 60 kW of billing demand Rs. 195/kW/month
Energy charges	Rs. 4.60/ kWh
Reactive energy charges	Rs. 0.10/ kVArh

2.5 Analysis of electricity consumption

Table 2.5: Electricity consumption profile

Month & Year	Total electricity consumption (kWh)	Reactive Chargers (Rs for kVArh)	Sanctioned load/demand (kW)	Power factor	Recorded demand, (kW)	Demand charges (Rs)	Energy charges (Rs)	Monthly bill (Rs)
Jan-18	15,190	1,064	55	0.819	55	5,550	69,874	112,827
Feb-18	16,186	1,075	55	0.833	60	6,875	74,455	119,785
Mar-18	9,678	685	55	0.816	58	6,610	44,518	74,504
Apr-18	12,840	843	55	0.836	47	4,510	56,064	93,796
Average	13,474	917	55	0.83	55	5,886	61,228	100,228
Total	161,682		-	-	-	70,635	734,733	1,202,736

Figure 2.5 presents contract demand, recorded maximum demand and the energy consumption of the unit.

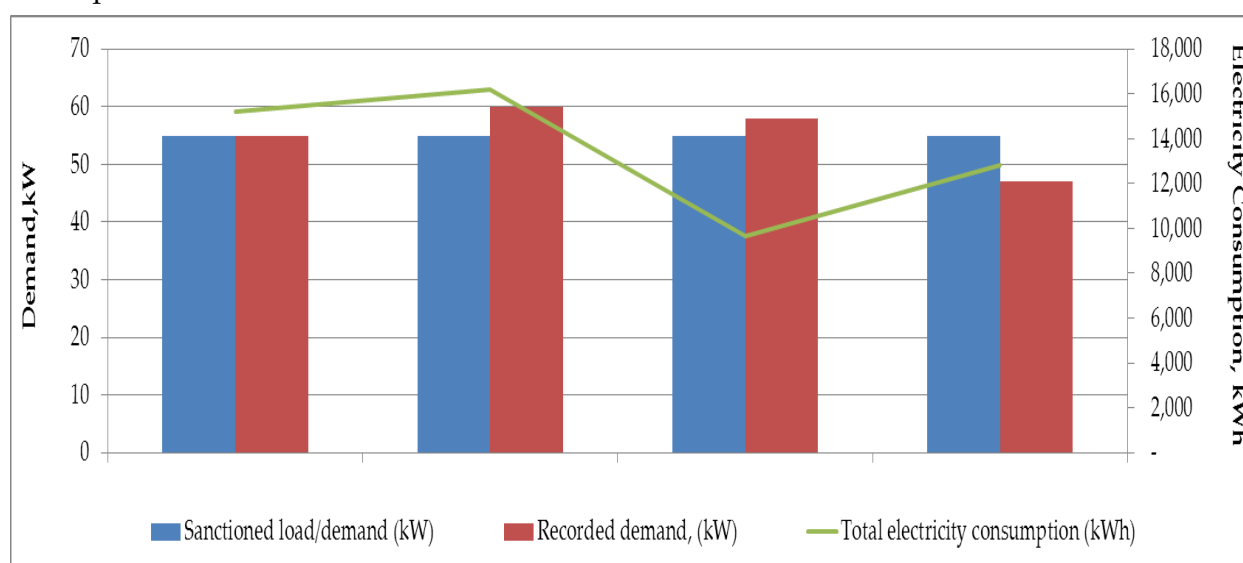

Figure 2.5: Demand pattern and energy consumption profile

2.6 Analysis of other energy forms/ fuels

The analysis of the other fuels/forms of energy used in the unit is given in table 2.6.

Table 2.6: Analysis of other energy/ fuel consumption

Parameters	NG (SCM)	HSD (Liters)
Consumption unit/year	269,216	2,400
Calorific value per unit	8,650	9,202
Equivalent toe per year	232.9	2.2
Price (Rs per unit)	26.6	60.5
Total price per year	7,160,248	145,200

The share of various energy forms used in the unit is given in figure 2.6.

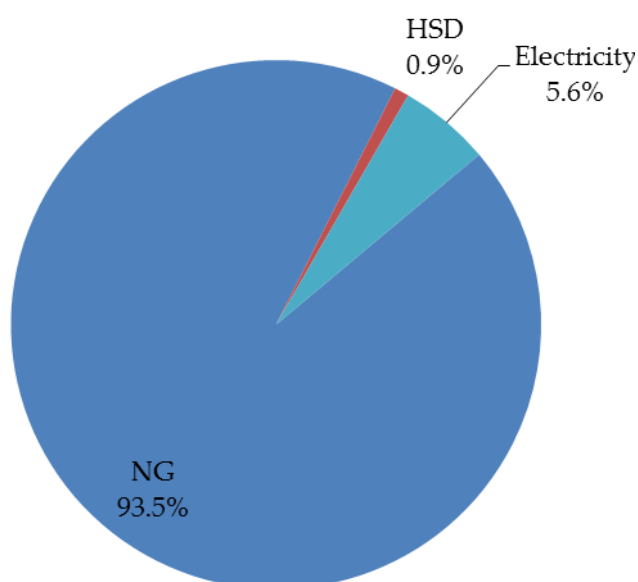

Figure 2.6: Percentage share of various fuel types in the unit

The plant is consuming about 161,682 kWh of electricity per year. The annual consumption of the NG is 269,216 SCM and HSD is 2,400 litres. The total energy consumption of the unit during last 12 months is estimated to be 249 toe which is equivalent to 85 lakh rupees. The total CO₂ emission during this period is estimated to be 610 tonnes. Electricity, HSD and natural gas were considered for CO₂ emission estimation.

3.0 Proposed technology for energy efficiency

Based on the measurements, observations/ findings during detailed assessment study conducted in the unit, the following technology has been identified for energy efficiency improvement. The detail is given below.

3.1 Replacing existing compressed air piping network with seamless piping network

3.1.1 Background

To cater to the compressed air need of the molding as well as glazing section, the plant has installed rotary screw compressor with variable speed drive. The capacity of the air compressor is 2.12 cubic meter per minute with installed motor of 15kW. The compressed air distribution network is parted into two areas (i) gazing section – flexible pipes (ii) molding section – the main header is MS pipe and distribution to battery system is flexible piping.

3.1.2 Observations and analysis

During the assessment study, leakage & pressure drop survey study of the compressed air distribution network conducted and it was found that there was enormous amount of compressed air leakages through different junction points, instruments regulator valve and supply valves in distribution network. Overall leakage of compressed air is estimated to be 54%. The all leakage points were highlighted to the plant team during the survey.

Figure 3.1.2: Power consumption trend of air compressor

3.1.3 Recommendation

Leaks are significant source of energy wastage in a compressed air system. Compressed air leaks can also contribute to problems with system operations, including:

- Fluctuating system pressure, which can cause air tool and other air-operated equipment to function less efficiently, which possibly affects the production.
- Excess compressor capacity, resulting in necessary increase in cost.
- Decreased service life and increased maintenance of supply equipment (including the compressor package) due to unnecessary cycling and increased run time.

By installing seam less pipes with suitable application specific nozzles, taking the necessary maintenance practices and periodic inspection of distribution network, it would be possible to reduce the air leakages significantly. Although leaks can occur in any part of the system, the most common problem areas are: couplings, hoses, tubes, pipe joints, valves, thread sealants, and point of use devices. Leakage rates are a function of the supply pressure in an uncontrolled system and increase with higher system pressures. Leakage rates are also proportional to the square of the orifice diameter.

Table 3.1.3: Leakage rates for different supply pressure

Leakage rates ^a (cfm) for different supply pressure and approximately equivalent orifice sizes						
Pressure (psig)	Orifice Diameter (inches)					
	1/64	1/32	1/16	1/8	1/4	3/8
70	0.3	1.2	4.8	19.2	76.7	173
80	0.3	1.3	5.4	21.4	85.7	193
90	0.4	1.5	5.9	23.8	94.8	213
100	0.4	1.6	6.5	26.0	104	234
125	0.5	2.0	7.9	31.6	126	284

*For well-rounded orifices, multiply the values by 0.97, and for sharp-edged orifices, multiply the values by 0.61.

Leakages was observed in different sections of the plant during the study and cumulative air losses due to leakages is estimated to be 1.58 cubic meter per min, which resulted in additional power consumption of 13.24 kW.

3.2 Cost benefit analysis

The estimated saving in annual operation cost by replacement of existing air compressor pipe lining is Rs. 2.7 lakhs. The investment² requirement is Rs 4.5 lakh with a simple payback period of 1.7 years. The detailed calculations of the recommended energy conservation measures for DPR are provided in table 3.2.

² Quotation - 1 has been considered for estimation of investments

Table 3.2: Cost benefit analysis for recommended energy savings measures

Particulars	Unit	Values
Total installed capacity	m ³ /min	2.12
Actual air delivery	m ³ /min	2.93
Actual demand of the compressed air	m ³ /min	1.35
Compressed air leakage	m ³ /min	1.58
Percentage loss in leakage	%	54
Specific Power Consumption	kW/m ³ /min	8.8
Annual reduction of power consumption by avoiding leakage	kWh/annum	35,760
Annual monetary benefit	Rs in lakh	2.66
Capital cost for installation of seamless pipe	Rs in lakh	4.5
Simple payback period	Rs	1.7

3.3 Pre-training requirements

Not required

3.4 Process down time for implementation

The estimated process down time required for implementation of recommended measure is estimated to be 3-5 days.

3.5 Environmental benefits

3.5.1 CO₂ reduction³

Implementation of the selected energy conservation measures in the unit may result in reduction in CO₂ emissions due to reduction in overall energy consumption. The estimated reduction in GHG emission by implementation of the recommended energy conservation measures is 29.3 tonne of CO₂ per year.

3.5.2 Reduction in other pollution parameters (gas, liquid and solid)

There is not significant impact on the reduction in other pollution parameters including gas, liquid and solid.

4.3 Marketing & selling arrangement

The marketing and selling arrangements of the unit are given in table 4.3.

Table 4.3: Marketing & selling arrangements

Items	Remarks
Main Markets (locations)	Pan India
Locational advantages	-
Any USP or specific market strength	-
Whether product has multiple applications	NA
Distribution channels (e.g. direct sales, retail network, distribution network)	Direct sales
Marketing team details, if any.	NA

4.4 Risk analysis and mitigation

The risk analysis and mitigation for the proposed options are given in table 4.4.

Table 4.4: Risk analysis and mitigation

Type of risk	Description	Mitigation
Technology	The equipment/technology provided by the supplier may not be of high quality, which may result in underperformance.	The equipment/technology should be procured from standard/reputed vendors only.
Market /Product	Demand of the product manufactured by the unit may change resulting in lower capacity utilization.	Regular vigilance/tab on the market scenario by the SME will help in better understanding of new substitute product. The unit may modify the product line based on the emerging market trend.
Policy/Regulatory	Changes in government regulation/policy related to pollution and taxes & duties can affect the viability of the unit.	Local industrial association may play a role in discussing these issues with the relevant governmental bodies on a regular basis, so that any concerns of the unit are brought to their notice.

4.5 Sensitivity analysis

A sensitivity analysis for various scenarios which may affect the return on investment is given in table 4.5.

Table 4.5: Sensitivity analysis

S. No.	Scenario	D/E ratio	Payback period (months)	NPV (Rs lakh)	IRR (%)	DSCR	ROI (%)
1	10% increase in estimated savings	100% equity	19.80	3.71	41.41	-	21.73
		70:30	19.90	3.06	37.23	2.12	32.32
		50:50	19.90	3.25	38.42	0.92	28.13
2	10% reduction in estimated savings	100% equity	24.70	2.34	30.21	-	18.00
		70:30	24.80	1.72	25.91	2.12	28.23
		50:50	24.80	1.90	27.14	0.92	23.95
3	10% rise in interest rates	70:30	22.10	2.23	31.19	2.12	30.36
		50:50	22.10	2.45	32.53	0.92	26.12
4	10% reduction in	70:30	22.10	2.56	32.08	2.12	30.65

DPR – EE Compressed Air Network (Amrut Ceramic)

S. No.	Scenario	D/E ratio	Payback period (months)	NPV (Rs lakh)	IRR (%)	DSCR	ROI (%)
	interest rates	50:50	22.10	2.70	33.17	0.91	26.34

5.0 Conclusions & recommendations

The DPR prepared for the replacement of compressed air piping network with seamless aluminium piping network based on the performance assessment study conducted at unit and the acceptance of the unit management. The brief of selected energy conservation measure is given below.

5.1 List of energy conservation measures

The brief summary of the energy conservation measures are given in table 5.1.

Table 5.1: Summary of the energy conservation measures

Technology	Annual energy saving	Investment (Rs lakh)	Monetary savings	Simple payback period (Years)	Emission reduction (tonnes of CO ₂)
	Electricity (kWh)		(Rs lakh/year)		
Replacing existing compressed air piping network with seamless piping	35,760	4.50	2.66	1.70	29.30

The measure has an estimated investment of 4.5 lakh rupees and can yield a savings of 2.7 lakh rupees per year. The total annual reduction in emission by implementation of recommended measure is estimated to be 29.3 tonnes of CO₂. The financial indicators provided above in the table shows the project is financially viable and technically feasible.

5.2 Summary of the project

The summary of the project is given in table 5.2.

Table 5.2: Summary of the project

S. No.	Particulars	Unit	100% equity	D/E- 70:30	D/E- 50:50
1	Cost of Project	Rs. In Lakh	4.5	4.5	4.5
2	D/E Ratio	-	-	7:3	1:1
3	Project IRR	%	35.9	31.6	32.8
4	NPV	Rs. In Lakh	3.0	2.4	2.6
5	DSCR	-	-	2.1	0.9

5.3 Recommendations

The financial indicators provided above show the project is financially viable and technically feasible. It is recommended that the implementation of the identified the energy conservation measures may be undertaken by the unit.

6.0 Financing schemes for EE investments for MSME sector

Government of India has many schemes to provide concessional finance for EE technologies among MSMEs. Some major government schemes are summarised in table 6.1.

Table 6.1: Major government schemes

Name of the scheme	Brief Description and key benefits
ZED assessment and certification	<p>Assessment process, fee and subsidy are as follows: Online (e-Platform) self-assessment: Nil fee Desk Top assessment : Rs 10,000 per SME Complete assessment : Rs 80,000 ZED rating per SME; Rs 40,000 for additional ZED defence rating; Rs 40,000 for re-rating The rating costs will include cost of Rs 10,000/- as certification cost by QCI. Subsidy for Micro, Small and Medium Enterprises are 80%, 60% and 50% respectively.</p>
Credit Linked Capital Subsidy Scheme (CLCSS) (2000-ongoing)	<p>15% capital subsidy of cost of eligible plant and machinery / equipment for adoption of proven technologies for approved products / sub-sectors for MSE units subject to ceiling of INR 15 lakhs</p>
Credit Guarantee Fund Scheme for Micro and small Enterprises (in partnership with SIDBI) (2000-ongoing)	<p>This scheme was launched by MoMSME and SIDBI to alleviate the problem of collateral security and enable micro and small scale units to easily adopt new technologies. Under the scheme, collateral free loans up to Rs 1 crore can be provided to micro and small scale units. Additionally, in the event of a failure of the SME unit which availed collateral free credit facilities to discharge its liabilities to the lender, the Guarantee Trust would guarantee the loss incurred by the lender up to 75 / 80/ 85 per cent of the credit facility.</p>
Technology and Quality Up gradation Support to MSMEs (TEQUP) (2010-ongoing)	<p>The benefits available to SMEs under TEQUP include –technical assistance for energy audits, preparation of DPRs and significant capital subsidy on technologies yielding an energy savings of over 15%. The scheme offers a subsidy of 25% of the project cost, subject to a maximum of Rs. 10 lakhs. TEQUP, a scheme under NMCP, focuses on the two important issues in enhancing competitiveness of the SME sector, through EE and Product Quality Certification.</p>
Technology Upgradation Fund Scheme (TUFS) (1999-ongoing)	<p>Interest subsidy and /or capital subsidy for Textile and Jute Industry only.</p> <ol style="list-style-type: none"> To facilitate Technology Up gradation of Small Scale (SSE) units in the textile and jute industries. Key features being: <ul style="list-style-type: none"> Promoter's margin -15%; Subsidy - 15% available on investment in TUF compatible machinery subject to ceiling of Rs 45 lakh; Loan amount - 70% of the cost of the machinery by way of Term Loan

Name of the scheme	Brief Description and key benefits
	<ul style="list-style-type: none"> Interest rate: Reimbursement of 5% on the interest charged by the lending agency on a project of technology upgradation in conformity with the Scheme Cover under Credit Guarantee Fund Scheme for Micro and Small Enterprises (CGMSE) available <p>2. To enable technology upgradation in micro and small power looms to improve their productivity, quality of products and/ or environmental conditions</p> <ul style="list-style-type: none"> 20% margin subsidy on investment in TUF compatible specified machinery subject to a ceiling of Rs 60 lakhs or Rs 1crore (whichever is applicable) on subsidy amount to each unit - released directly to the machinery manufacturer.
Tax incentives	<ul style="list-style-type: none"> Accelerated depreciation is provided to the customers / users of the energy saving or renewable energy devises under the direct tax laws. Under indirect taxes, specific concessional rates of duty are only available to CFLs and not to all energy efficient products A further waiver of import tariffs and taxes for EE technology imports are dealt on a case to case basis, meaning higher costs for those imported technologies that are not available in the domestic markets at present.

Two financing schemes have been created by Bureau of Energy Efficiency (BEE) under The National Mission for Enhanced Energy Efficiency (NMEEE) for financing of energy efficiency projects - Venture Capital for Energy Efficiency (VCFEE) and Partial Risk Guarantee Fund for Energy Efficiency (PRGFEE). These funds seek to provide appropriate fiscal instruments to supplement the efforts of the government for creation of energy efficiency market. Highlights of these two schemes are provided in the table 6.2.

Table 6.2: BEE's VCFEE and PRGFEE scheme

Venture Capital for Energy Efficiency (VCFEE)	<ul style="list-style-type: none"> This fund is to provide equity capital for energy efficiency projects in Government buildings and Municipalities in the first phase. A single investment by the fund shall not exceed Rs 2 crore Fund shall provide last mile equity support to specific energy efficiency projects, limited to a maximum of 15% of total equity required, through Special Purpose Vehicle (SPV) or Rs 2 crore, whichever is less
Partial Risk Guarantee Fund for Energy Efficiency (PRGFEE)	<ul style="list-style-type: none"> A PRGF is a risk sharing mechanism lowering the risk to the lender by substituting part of the risk of the borrower by granting guarantees ensuring repayment of part of the loan upon a default event. Guarantees a maximum 50% of the loan (only principal). In case of default, the fund will: <ul style="list-style-type: none"> Cover the first loss subject to maximum of 10% of the total guaranteed amount Cover the remaining default (outstanding principal) amount on

Venture Capital for Energy Efficiency (VCFEE)	<ul style="list-style-type: none"> • This fund is to provide equity capital for energy efficiency projects in Government buildings and Municipalities in the first phase. • A single investment by the fund shall not exceed Rs 2 crore • Fund shall provide last mile equity support to specific energy efficiency projects, limited to a maximum of 15% of total equity required, through Special Purpose Vehicle (SPV) or Rs 2 crore, whichever is less
	<p style="text-align: center;">partial basis upto the maximum guaranteed amount</p> <ul style="list-style-type: none"> • PFI shall take guarantee from the PRGFEE before disbursement of loan to the borrower. • The Guarantee will not exceed Rs 300 lakh per project or 50% of loan amount, whichever is less. • Maximum tenure of the guarantee will be 5 years from the date of issue of the guarantee

Indian Renewable Energy Development Agency (IREDA), a non-banking financial institution established by the government also extends financial assistance for setting up projects relating to new and renewable sources of energy and energy efficiency/conservation. The detailed financing guidelines for energy efficiency projects are provided in table 6.3.

Table 6.3: IREDA's financing guidelines

Eligible companies who can apply	Private Sector Companies/ firms, Central Public Sector Undertaking (CPSU), State Utilities/ Discoms/ Transcos/ Gencos/ Corporations, Joint Sector Companies which are not loss making.
Minimum loan amount	<ul style="list-style-type: none"> • Rs. 50 lakh
Type of projects considered for term loans	<ul style="list-style-type: none"> • Replacement / retrofit of selected equipment with energy efficient equipment • Modification of entire manufacturing processing • Recovery of waste heat for power generation
Incentive available	<ul style="list-style-type: none"> • Rebate in central excise duty • Rebate in interest rate on term loan • Rebate in prompt payment of loan instalment
Interest rate	<ul style="list-style-type: none"> • 10.60% to 11.90% depending upon the grading of the applicant with prompt payment rebate of 15 bps if payment is made on / before due dates • Interest rates are floating and would be reset on commissioning of the project or two years from the date of first disbursement. Thereafter, the rates will be reset after every two years. • Rebate of 0.5% in interest rates are available for projects set up in North Eastern States, Sikkim, J&K, Islands, Estuaries. Rebates of 0.5% in interest rates are also available for projects being set up by SC/ST, Women, Ex Servicemen and Handicapped categories involving project cost of upto Rs. 75.00 lakh.
Loan	Upto 70% of the total project cost. Promoter's contribution should be Minimum 30% of the total project cost
Maximum debt	3:1

equity ratio	The project cash flow should have a minimum average Debt Service Coverage Ratio of 1.3
Maximum repayment period	12 years with moratorium of maximum 12 months
Procurement procedures	The borrower is required to follow the established market practices for procurement and shall demonstrate that the quality goods and services are being purchased at reasonable and competitive prices. Wherever the loan is sanctioned against international lines of credit such as the World Bank, Asian Development Bank, kfW, etc., the relevant procedures will have to be followed and requisite documents will have to be submitted by the borrower

Small Industries Development Bank of India (SIDBI) has several schemes and focused lines of credit for providing financial assistance for energy efficiency and cleaner production projects for SMEs. Highlights of some of the major financial assistance schemes/projects managed by SIDBI are given in table 6.4.

Table 6.4: Major EE financing schemes/initiatives of SIDBI

End to End Energy Efficiency (4E) Program	<p>Support for technical /advisory services such as:</p> <ul style="list-style-type: none"> • Detailed Energy Audit • Support for implementation • Measurement & Verification <p>Financing terms:</p> <ul style="list-style-type: none"> • Terms loans upto 90% • Interest rate upto 3% below normal lending rate.
TIFAC-SIDBI Revolving Fund for Technology Innovation (Srijan Scheme)	<p>To support SMEs for up-scaling and commercialization of innovative technology based project at flexible terms and interest rate.</p> <p>Preference accorded to sustainable technologies / products. Soft term loan with an interest of not more than 5%.</p>
Partial Risk Sharing Facility for Energy Efficiency (PRSF) Project (supported by World Bank)	<p>Sectors covered:</p> <ul style="list-style-type: none"> • Large industries (excluding thermal power plants) • SMEs • Municipalities (including street lighting) • Buildings <p>Coverage:</p> <ul style="list-style-type: none"> • The minimum loan amount Rs 10 lakh and maximum loan amount of Rs 15 crore per project. • The extent of guarantee is 75% of the loan amount
JICA-SIDBI Financing Scheme	<ul style="list-style-type: none"> • The loan is used to provide SMEs with funds necessary to invest in energy-saving equipment (and some medical equipment) in the form of two-step loans through SIDBI or three-step loans through intermediary financial institutions.

	<ul style="list-style-type: none"> • Project uses an Energy Saving Equipment List approach • Equipment/machinery with energy saving potential less than 10% is not eligible. • Interest rate: As per credit rating and 1% below the normal lending rate • Separate technical assistance component which is used for wetting of loan applications, holding seminars to raise awareness of energy saving among SMEs and to improve the ability of financial institutions to screen loan applications for energy-saving efforts
KfW-SIDBI Financing Scheme	<p>Coverage</p> <ul style="list-style-type: none"> a) SMEs for energy efficiency projects b) SMEs and clusters for cleaner production and emission reduction measures, waste management and Common Effluent Treatment Plant (CETP) facilities <p>Interest rate</p> <p>As per credit rating and 1% below the normal lending rate</p> <p>Eligible criteria</p> <p>3 t CO₂ emission reduction per year per lakh invested</p> <p>List of eligible equipment/technology and potential suppliers developed for guidance</p>

State Bank of India (SBI) has been provided a green line of credit by Japan Bank for International Cooperation (JBIC) for financing of energy efficiency investments. Highlights of the line of credit are given in table 6.5.

Table 6.5: JBIC-SBI Green Line

<p><u>Key Features</u></p> <ul style="list-style-type: none"> • Amount : USD 90 million • Repayment Schedule: First repayment on May 30, 2017 and final repayment date May 30, 2025 (equal instalment) <p><u>Eligibility Criteria</u></p> <ul style="list-style-type: none"> • Projects contributing to preservation of global environment, i.e. significant reduction of GHG emissions • Acceptance of JBIC-MRV (“J-MRV”) by the project proponent in terms of the numerical effect of the environment preservation. To ensure effective GHG reduction emissions in Green financed projects, JBIC reviews such effects through simple and practical Measurement Reporting Verification (MRV) process both in (a) prior estimation and (b) ex-post monitoring. • Procurement in line with the “Guidelines for Procurement under Untied Loans by Japan Bank for International Cooperation”
--

Canara bank has a dedicated scheme for financing EE investment among SME sector as mentioned in table 6.6.

Table 6.6: Canara bank scheme of EE SME loans

Purpose	For acquiring/adopting energy conservation/savings equipment/ measures by SMEs
Eligibility	Units under Small and Medium Enterprises Cost of energy for the unit should constitute not less than 20% of the total cost of production Unit should possess energy audit report issued by an approved energy Consultant/Auditor. Borrowal a/cs-ASCC code S1 or S2 during previous review. Current account holders having dealings exclusively with us satisfactorily for a period of last one year
Maximum loan	Maximum Rs 100 lakhs in the form of term loan
Security	Prime: Assets created out of loan Collateral: Upto Rs.5 lakhs - NIL Above Rs.5 lakhs, as determined by the bank
Repayment	Maximum 5-7 years including moratorium of 6 months
Guarantee cover	Cover available under CGMSE of CGTMSE available for eligible loans
Margin	10% of the project cost
Rate of interest	1% less than the applicable rate
Upfront fee	1% of the loan
Insurance cover	Assets acquired and charged as security to Bank to be insured
Special offer, if any	Grants : Bank provides 25% of the cost of Energy Audit / Consultancy charges with a maximum of Rs 25000/- to the first 100 units on a first come first served basis which is in addition to the grant of Rs 25000/- being provided by IREDA(First 100 units)

Among the private sector banks in India, Yes Bank is also active in financing of renewable energy and energy efficiency projects. The bank has an MOU with SIDBI for providing funding for EE through PRSF.

Most commercial banks charge interest rate between from 11% to 13% from MSMEs depending upon general criteria such as credit ratings, references, past lending record, balance sheet for last 3 years and so on. Interest rebate is offered for a few customers whose collateral value is around 125% of the loan amount. Further 0.5% concession in interest rate was offered to women entrepreneurs.

COMPARISON SHEET FOR MS & AL PIPING FOR COMPRESSED AIR				
SR. NO.		MS	GI	Alu Pipe
1	INITIAL COST	MINIMUM	20% Higher than MS	Almost double of that MS
2	LIFE	10-15 years	10-15 years	30-40 years
3	Air quality	worst	Slightly better than MS in initial few years but becomes almost same after 2-3 years of operation	Excellent air Quality meeting ISO 8573 class 1, since no rusting takes place in the system
4	Leakage	Most prone to leakages within a few years of operation, in general 5-7% leakges start within five years of operation	Most prone to leakages within a few years of operation, in general 5-7% leakges start within five years of operation	The system is designed for a leakage rate of 0.0001 scfm per joint and is guaranteed for next ten years of operation, resulting in 5% saving on account of electricity cost
5	Pressure drop	maximum, due to rusting and rough surface	maximum, due to rusting and rough surface	Minimum as the inner surface of the piping is of glass finish and results in smooth flow of air. This is almost 50% in comparison to MS/GI piping, and results in 5% saving for a 0.5 bar pressure drop
6	Down Stream Equipment	Because of high corrosion rate , the air quality is not good resulting in frequent breakdown of pneumatic cylinders, valves and othe accessories	Because of high corrosion rate , the air quality is not good resulting in frequent breakdown of pneumatic cylinders, valves and othe accessories	Because of low corrosion rate and better air quality, it helps in improving the life of downstream pneumatic cylinders, valves and othe accessories, resulting on higher availability of equipment, thus resulting in maximum productivity and lower maintenance cost of the down stream equipments
7	Installation	Needs long time and lots of labour is involved almost 40-50%	Needs long time and lots of labour is involved almost 40-50%	Fastest and labour cost involved is about 10% only. No specialised manpower is required
8	Fire Hazard	maximum, during welding and repair works	Not in case of thread joints but in case of welded joints fire hazard is as good as in case of MS	No fire hazard at all since no welding is required
9	Maintenace cost of piping system	Needs leakage test every six months and painting atleast once a year	Needs leakage test every six months and painting atleast once a year	No maintenace cost for next ten years
10	Modularity	Non modular, normally not usable after you shift your plant or change location of	Non modular, normally not usable after you shift your plant or change location of equipments	Modular, could be dismantled within hours and shifted to another place without wastages
