|--|---|--|
| General summary of the study tour  | New Zealand has a small population with only 5% human population and the rest is animal. New Zealand is very dependent on its nature. Therefore energy efficiency and reduction of emission is key priority to manage sustainability of livelihood (rather than cost)   | Johan Potgieter<br>Professor of Robotics<br>School of Engineering &<br>Advanced Technology Massey<br>University<br><a href="mailto:J.Potgieter@massey.ac.nz">J.Potgieter@massey.ac.nz</a><br>021 709 403   |
| Attachment: 1. Overview of the Study Tour_Massey University_Johan Pottgieter |   |  |
| General overview of energy use in NZ   | <p>The main focus of energy efficiency in dairy sector in New Zealand is done at the level of farming. On the side of manufacturing, some of the measures including:</p> <ul style="list-style-type: none"> <li>• Variation rate irrigation</li> <li>• Nutrient management</li> <li>• Water heating Chemical CIP <ul style="list-style-type: none"> <li>◦ Solar</li> <li>◦ Heat pumps</li> <li>◦ Heat recovery e.g. refrig.</li> <li>◦ desuperheaters</li> </ul> </li> <li>• Methane capture</li> <li>• Variable speed pumping</li> <li>• Refrigeration optimisation <ul style="list-style-type: none"> <li>◦ New milk cooling regulations</li> <li>◦ Insulation</li> </ul> </li> </ul> | Don J. Cleland<br>Professor of Process Engineering<br>School of Engineering &<br>Advanced Technology Massey<br>University<br>Ph: +64-6-350 5240<br>Mobile: +64-21-535 940<br>Email: <a href="mailto:d.cleland@massey.ac.nz">d.cleland@massey.ac.nz</a> |

| Overview of agriculture sector in NZ   | NZ exported 95% of its dairy. Therefore there is a lot of emphasis on ensuring food safety and regulating the product to be fit for export  | Felicity Bloor<br>Ministry of Primary Industry<br><a href="mailto:Felicity.Bloor@mpi.govt.nz">Felicity.Bloor@mpi.govt.nz</a>   |
| Attachment: 3. NZ Agriculture Sector Overview_MPI_Felicity Bloor             |   |  |
| Overview of technology innovation in dairy sector                            | NZ encourages continuous innovation in dairy sector to increase productivity, improve revenue and reduce energy and water use by developing a Primary Growth Partnership Program – which is a public private partnership program  | Tess McCaw<br>Ministry of Primary Industry<br><a href="mailto:Tess.Mccaw@mpi.govt.nz">Tess.Mccaw@mpi.govt.nz</a>   |
| Attachment: 4. NZ Primary Growth Partnership Program_MPI_Tess McCaw          |   |  |

|--|---|---|
| Regulation in Dairy Sector in NZ   | <p>Energy efficiency measures have to be done with balance to food safety and risk management program that regulates the following:</p> <ul style="list-style-type: none"> <li>o Siting, design and construction</li> <li>o Equipment specifications</li> <li>o Milk harvesting activities</li> <li>o Animal health management</li> <li>o Veterinary oversight</li> <li>o Farm dairy water quality</li> <li>o Milk cooling</li> <li>o Control of chemicals</li> <li>o Monitoring of milk quality</li> </ul> | <p>Natalie Collins<br/> Ministry of Primary Industry<br/> <a href="mailto:Natalie.Collins@mpi.govt.nz">Natalie.Collins@mpi.govt.nz</a></p>  |
| Attachment: 5. Dairy Sector Regulation Overview_MPI_Natalie Collins  |   |   |
| Energy Efficiency Authority body in NZ   | <p>EECA is the authority body in NZ on energy efficiency. It works with company on a partnership basis to encourage energy efficiency technology adoption including the most recent technology demonstration projects:</p> <ul style="list-style-type: none"> <li>o Fonterra: Co-firing biomass at its Brightwater factory</li> <li>o Synlait: NZ's first installation of a large electrode boiler (nominally 6 MW, upgradeable to 12 MW) at its Dunsandel factory</li> </ul>                               | <p><b>Michael Henry</b><br/> Senior Strategy and Programme Adviser<br/> Energy Efficiency and Conservation Authority (EECA)<br/> <a href="http://www.eeca.govt.nz">www.eeca.govt.nz</a>   <a href="http://www.energywise.govt.nz">www.energywise.govt.nz</a>   <a href="http://www.eecabusiness.govt.nz">www.eecabusiness.govt.nz</a><br/> DDI: +64 4 470 2224   Mob: +64 21 241 5846</p> |
| Attachment:<br>6. Synlait electrode boiler_EECA_FactSheet &<br>7. Overview of NZ Energy Efficiency Conservation and Authority_EECA_Michael Henry |   |   |
| Example of energy efficiency technology  | <p>Farm IQ is a technology to do farm management and measurement of various component such as: animal health, energy, water and effluent, etc. By measuring the components, farm managers can better work to reduce the emission. By using Farm IQ, Milk processors have better visibility of the quality of the milk and security of supply.</p>   | <p>Collier Isaacs<br/> FARMIQ<br/> M. 027 444 5412   E. <a href="mailto:collier.isaacs@farmiq.co.nz">collier.isaacs@farmiq.co.nz</a></p>  |

| Reduction of Emission in Dairy Sector  | The focus of emission reduction in dairy sector in New Zealand is on the farm side – because it's the most significant contributor to emission   | Harry Clark<br>Director<br>NZ Agriculture Greenhouse Gas Research Center<br><a href="mailto:trina.bishop@nzagrc.org.nz">trina.bishop@nzagrc.org.nz</a> |
| Attachment: 9. Reducing Emission in Agriculture Sector_GHG Research Centre_Harry Clark |  |  |
| Improving productivity through breeding technology in NZ                               | The best method of reducing resource consumption to obtain the same output (milk or revenue) is by improving the productivity of each animal. One of the means to do that is by employing better breeding technology:<br>Average New Zealand Cow (DairyNZ Stats 16/17)<br>4,217 litres milk<br>368 kg milk solids<br>4.75% Milkfat<br>3.82% Protein<br>Consumes 5 ton dry matter feed<br>85% of feed is grazed pasture +15% conserved feed: hay, grass silage, maize silage  | Kapy Macown<br>Fonterra<br><a href="mailto:Kapy.macown@lic.co.nz">Kapy.macown@lic.co.nz</a>  |
| Attachment: 10. NZ Breeding Technology_LIC_KapyMacown                                  |  |  |
| Best Practices in Energy Efficiency  | Fonterra is committed to reduce its energy consumption both at farm and processing level.<br>Some of the goals:<br><b>Reduce Energy Use:</b> 20%improvement in energy intensity by 2020(FY03 baseline)<br><b>Reduce Water Use:</b> 20% Reduction in Water Intensity by 2020(FY15 baseline)<br><b>Reduce Emissions:</b> 30%reduction in absolute emissions by 2030 (FY15 baseline)<br><ul style="list-style-type: none"> <li>No new coal boilers to be installed <b>post-2030</b></li> <li><b>Net Zero</b> emissions by 2050</li> </ul> | Frederick Conquer<br>Fonterra<br><a href="mailto:Frederick.Conquer@fonterra.com">Frederick.Conquer@fonterra.com</a>                                    |
